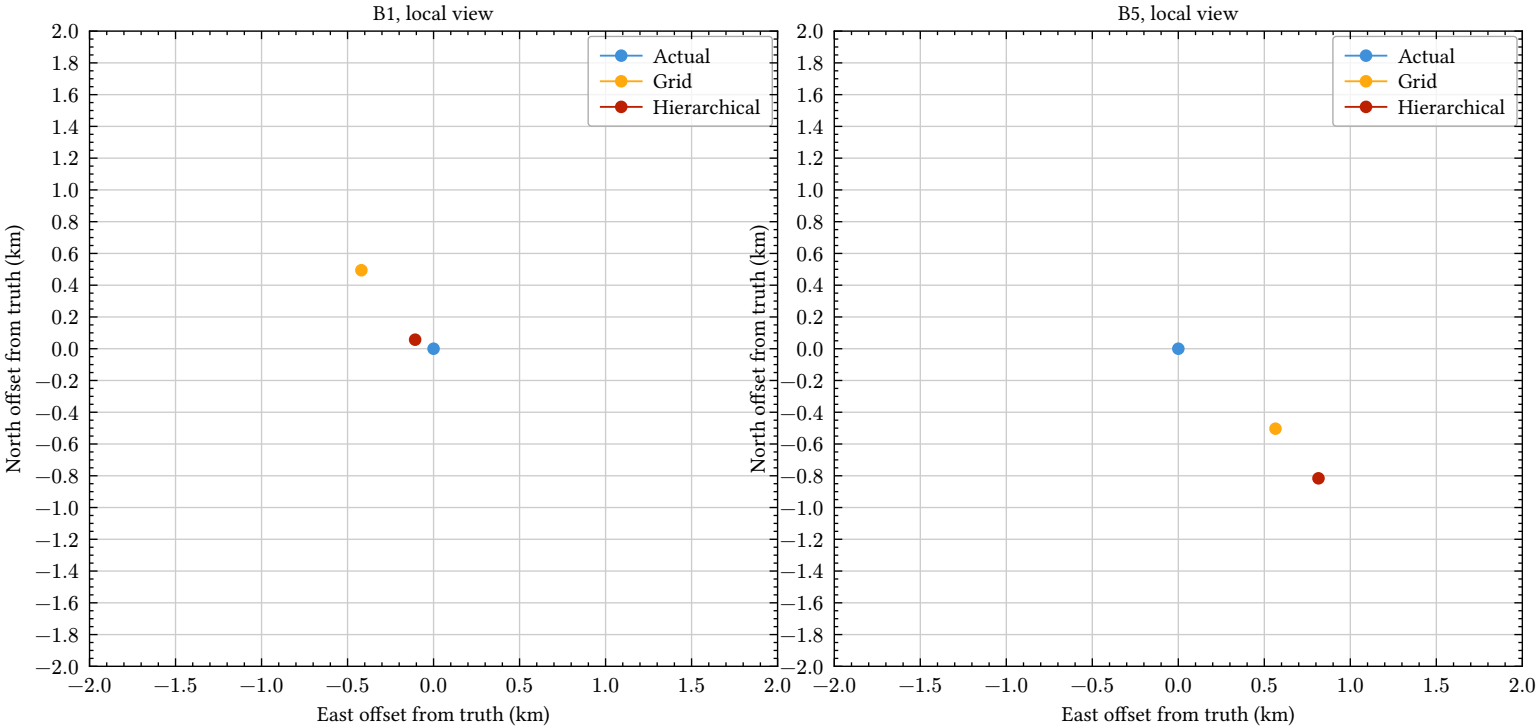
B1 and B5 estimate offsets from the true location



Each panel is a ±2 km view centered on truth. Markers show estimates from the first paired 10 km trial with type labels. B1 grid and hierarchical errors are 648 m and 121 m; B5 errors are 757 m and 1,153 m. Randomized estimates are outside the plotted windows: B1 is 289.4 km southeast, and B5 is 264.3 km northwest of truth.
