Cached refinement and single-addition expansion diagnostic

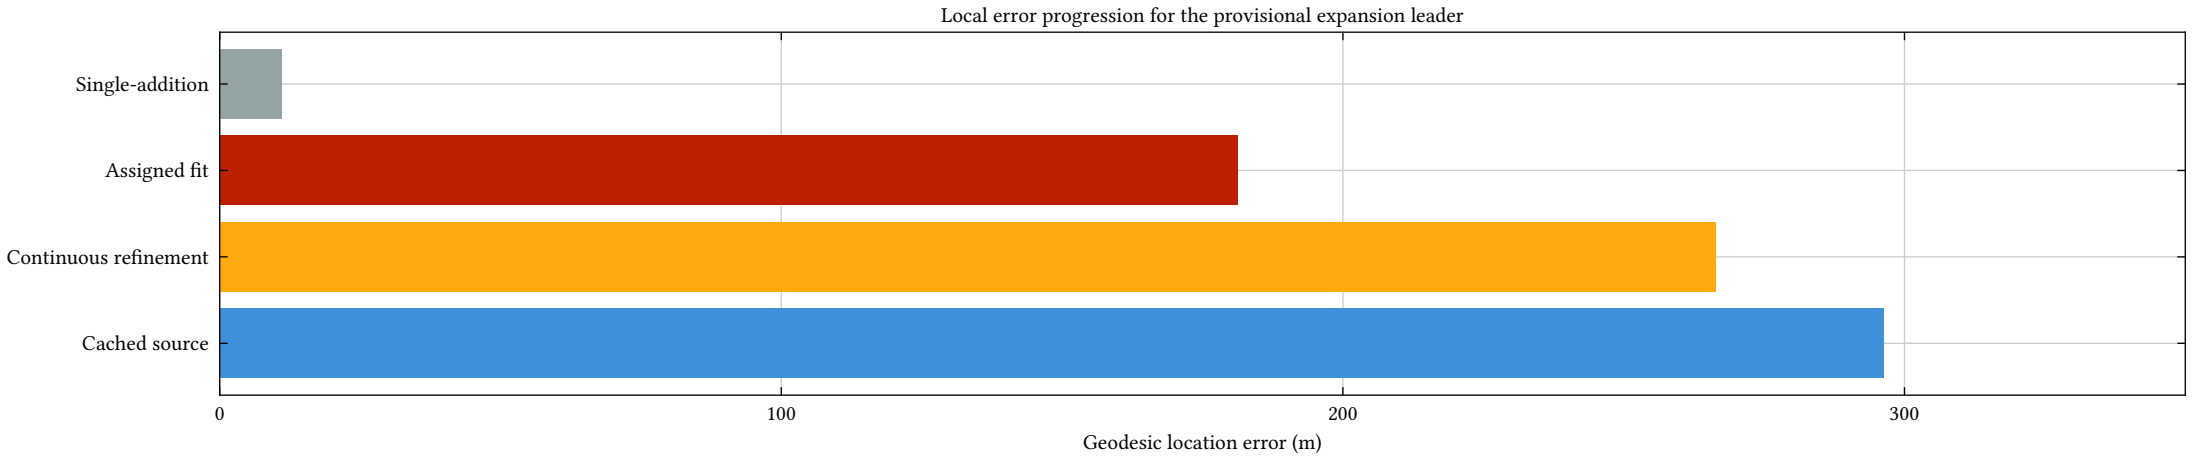

Development diagnostic. 64 modes were score-selected from an incomplete partial-cache run. Snapshot dated 2026-10-26.

Provisional expansion leader. 11.127 m and 5/5 correct assignments among 60 completed modes. Four modes remain pending. Full branch replay is incomplete. This is not an accepted fix or global certificate.

Earlier score winner remains wrong The source-score-rank-3 mode was the continuous and assigned-fit score winner. Single-addition expansion left it unchanged; it remains rank 2 among the 60 completed expansion modes, with 0 of 4 direct truth-key assignments.

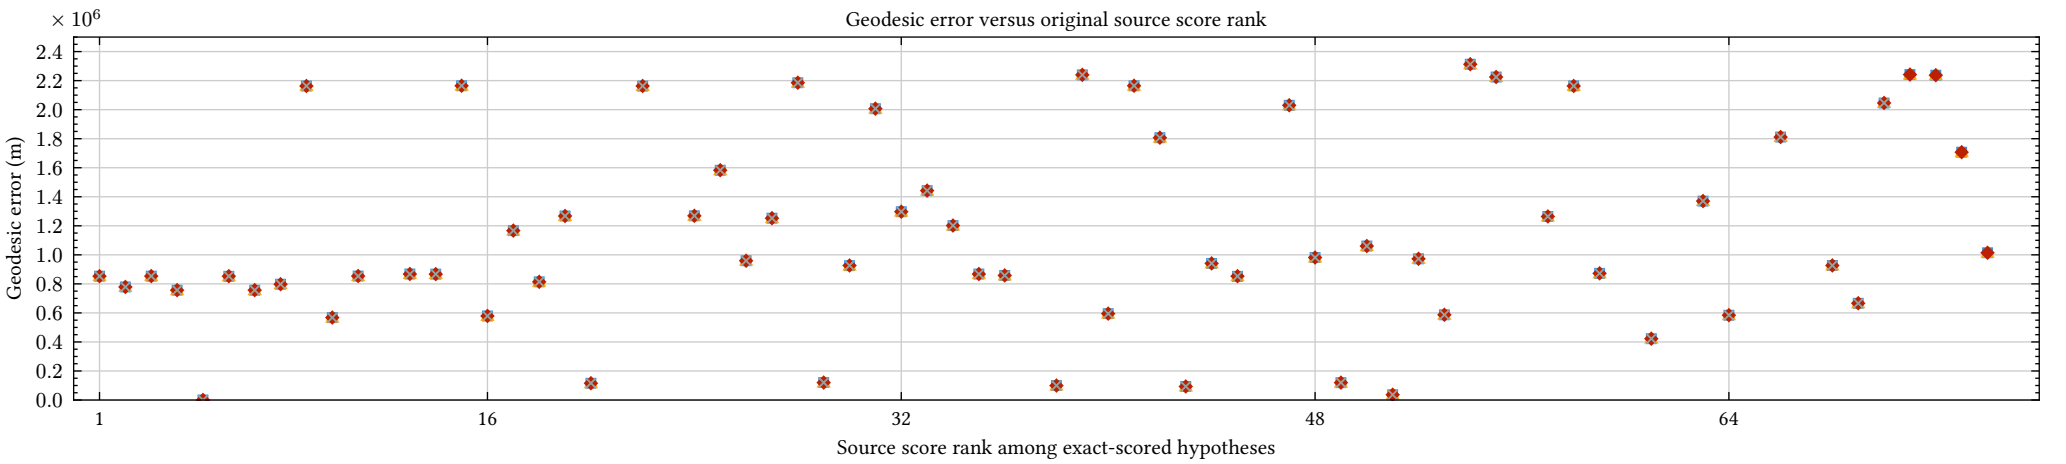

Provisional single-addition leader among completed modes This mode was the lowest-error selected alternative before expansion. Adding the fifth matched feature moved it from 181.279 m to 11.127 m and from rank 16 to rank 1 by objective among the 60 completed modes.

Mode	Source rank	Errors source ⟶ continuous ⟶ assigned ⟶ expanded (m)	Scores source ⟶ continuous ⟶ assigned ⟶ expanded	Correct assignments at each stage	Expansion score rank	Expansion error rank
Earlier score winner	3	853406.1 ⟶ 853439.8 ⟶ 853439.8 ⟶ 853439.8	15.238 ⟶ 10.324 ⟶ 10.324 ⟶ 10.324	0/4 ⟶ 0/4 ⟶ 0/4 ⟶ 0/4	2 / 60	24 / 60
Provisional expansion leader	5	296.3 ⟶ 266.4 ⟶ 181.3 ⟶ 11.127	16.356 ⟶ 14.86 ⟶ 14.777 ⟶ 5.027	4/4 ⟶ 4/4 ⟶ 4/4 ⟶ 5/5	1 / 60	1 / 60

Errors across the selected subset The first three marker series include all 64 score-selected modes. The single-addition series includes only 60 completed mode rows. Four modes remain pending; expansion ranks are within the completed subset only.

Series order. Square is cached source, triangle is continuous refinement, diamond is assigned fit, and cross is single-addition expansion. No legend box is used.

The assigned-fit diagnostic used 57.6525 s for 64 modes and 128 starts. The provisional single-addition pass took 1800.016071 s serially, covering 60 of 64 modes; four are pending and full branch replay is incomplete. These are independent stage diagnostics, not end-to-end or per-frame latency. The score winner after expansion has 5/5 true assignments and 11.127 m geodesic error within the completed subset, while the prior wrong winner remains 853.440 km away. This single provisional result does not establish an accuracy rate, acceptance, global ranking, or certificate. The source search left 47182 hypotheses exact-scored, 82 unresolved, and 1410282 in an unknown state at interruption.
