East Coast port-area observer sites

Ten synthetic test positions from Boston to Miami · squares show B1–B10

Coordinates are in data/sites/east-coast-ports-b1-b10.csv. All ten points fall in water cells in the project's 500 m Natural Earth land/water mask. Savannah and Jacksonville are river-port approaches because the coarse mask does not resolve their inland shipping channels. This map is for experiment planning, not navigation.
