# Eastern Seaboard pruning

## Full Eastern Seaboard

39,435 initial cells | 10 km nominal width

Retained cells  Rejected at this stage

GPU pruning replay · Exact terminal-cell parity with saved search · Cells smaller than a display pixel enlarged.
Zoom includes every retained region. Cell counts can increase through subdivision.

## Pruning at 10 km

1,146 retained | 38,289 rejected at this scale | remaining area 114,600.000 km²

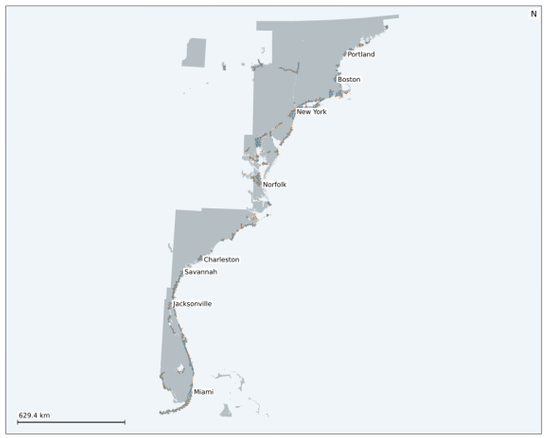

Retained cells  Rejected at this stage

GPU pruning replay · Exact terminal-cell parity with saved search · Cells smaller than a display pixel enlarged.
Zoom includes every retained region. Cell counts can increase through subdivision.

## Pruning at 1.25 km

10,271 retained | 10,521 rejected at this scale | remaining area 16,048.438 km²

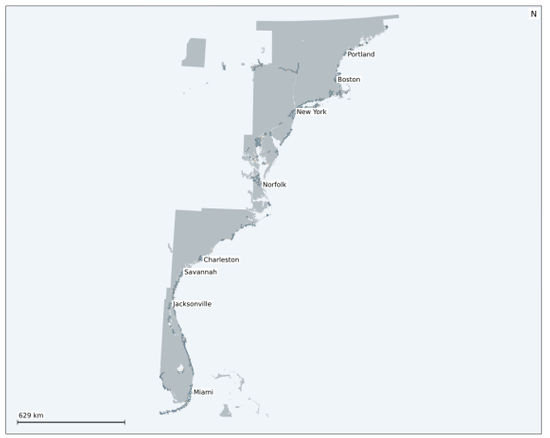

Retained cells  Rejected at this stage

GPU pruning replay · Exact terminal-cell parity with saved search · Cells smaller than a display pixel enlarged.
Zoom includes every retained region. Cell counts can increase through subdivision.

## Pruning at 156 m

29,965 retained | 68,815 rejected at this scale | remaining area 731.567 km²

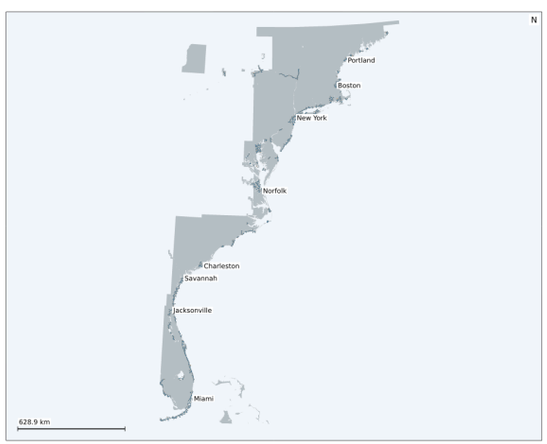

Retained cells  Rejected at this stage

GPU pruning replay · Exact terminal-cell parity with saved search · Cells smaller than a display pixel enlarged.
Zoom includes every retained region. Cell counts can increase through subdivision.

## Pruning at 19.5 m

33,484 retained | 99,736 rejected at this scale | remaining area 12.773 km²

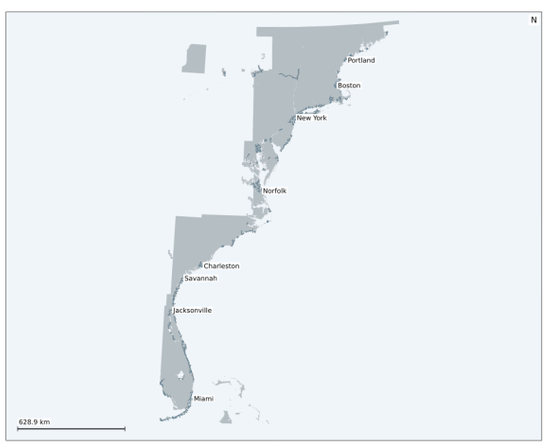

Retained cells  Rejected at this stage

GPU pruning replay · Exact terminal-cell parity with saved search · Cells smaller than a display pixel enlarged.
Zoom includes every retained region. Cell counts can increase through subdivision.

## Pruning at 0.61 m

36,149 retained | 101,451 rejected at this scale | remaining area 13,466.6 m²

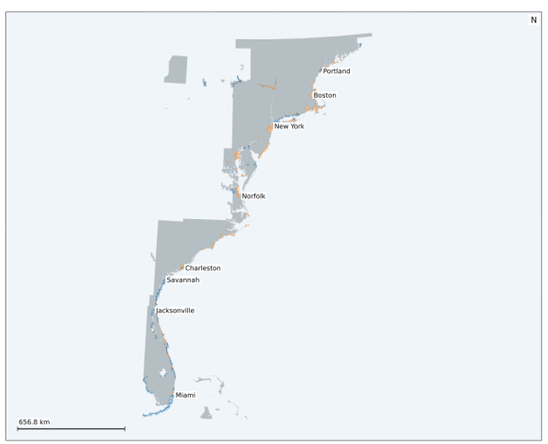

Retained cells  Rejected at this stage

GPU pruning replay · Exact terminal-cell parity with saved search · Cells smaller than a display pixel enlarged.
Zoom includes every retained region. Cell counts can increase through subdivision.

## Saved terminal center scores

148 consistent centers | 15,441 unresolved centers remain coast-wide

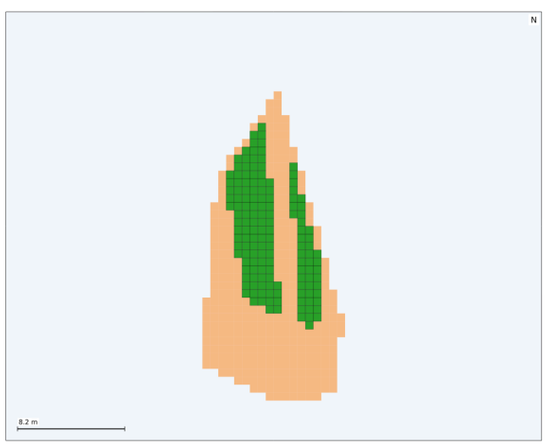

Unresolved centers  Rejected at this stage

Consistent centers

GPU pruning replay · Exact terminal-cell parity with saved search · Cells smaller than a display pixel enlarged.
Center scores do not reject entire terminal rectangles.

## Charleston consistent-center cluster

148 consistent centers | local detail; unresolved coast-wide candidates remain

Unresolved centers  Rejected at this stage

Consistent centers

GPU pruning replay · Exact terminal-cell parity with saved search · Cells smaller than a display pixel enlarged.
Zoom chosen from consistent-center extent, without observer truth.
