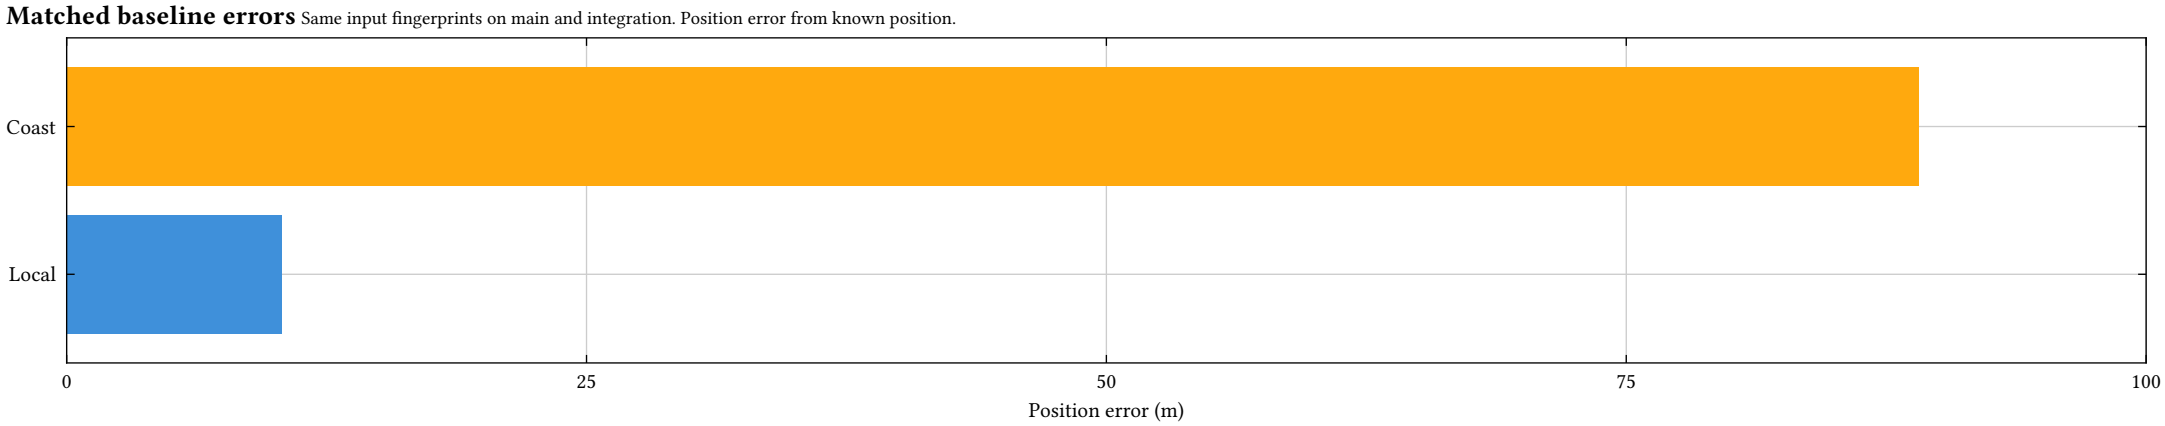
Search repair checkpoint

Verified historical and component evidence. Snapshot 2026-10-26.

Matched baseline errors

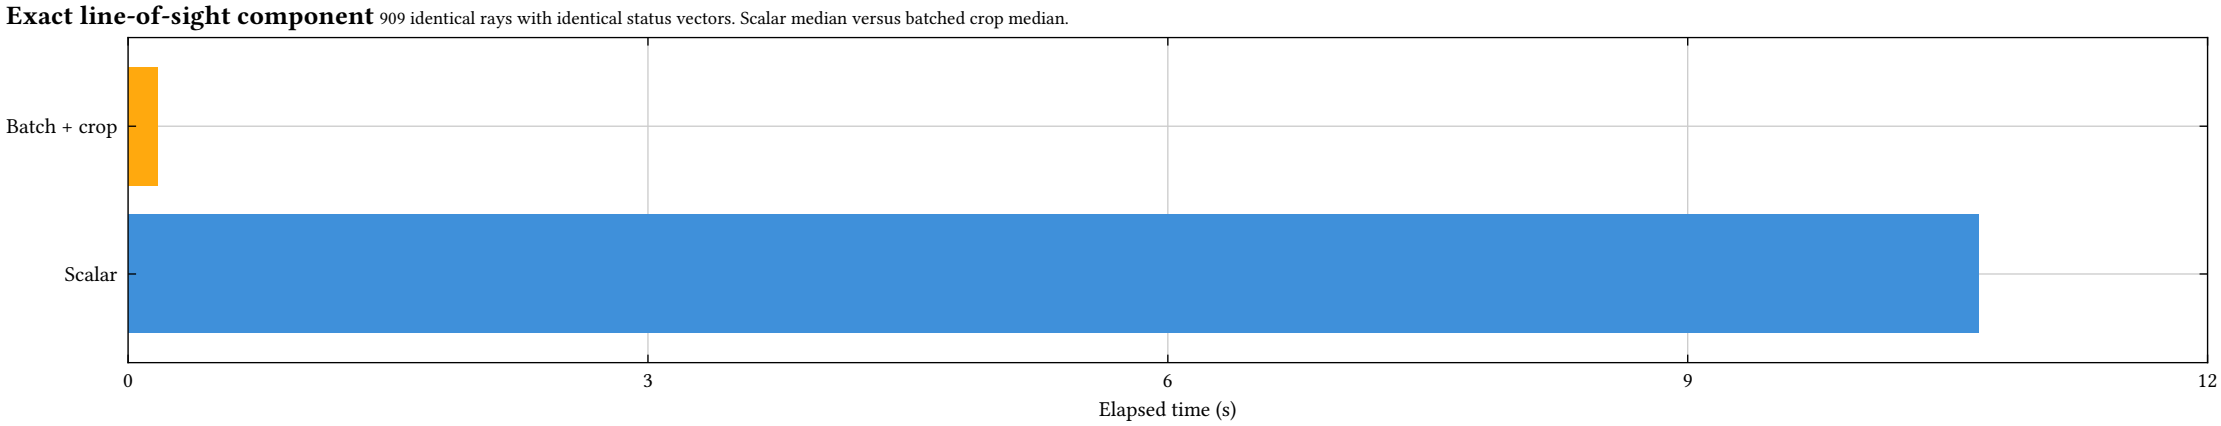
Same input fingerprints on main and integration. Position error from known position.



Local 10.3346 m in both branches. Coast 89.091 m in both branches.

Exact line-of-sight component

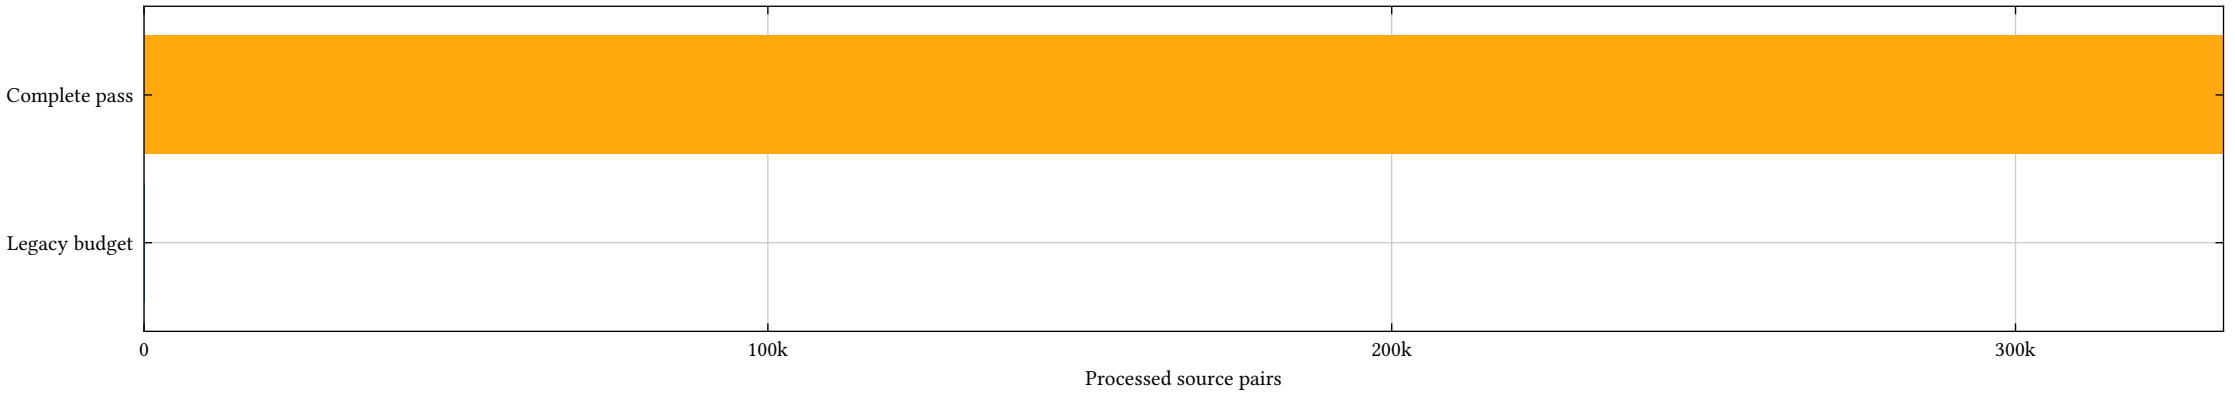
909 identical rays with identical status vectors. Scalar median versus batched crop median.



Scalar 10.6785 s. Batch plus crop 0.1697 s, with crop creation included. Statuses: 635 blocked, 274 clear, 0 unknown. This is fixture-level LOS time, not localization latency.

Bearing-wedge source coverage

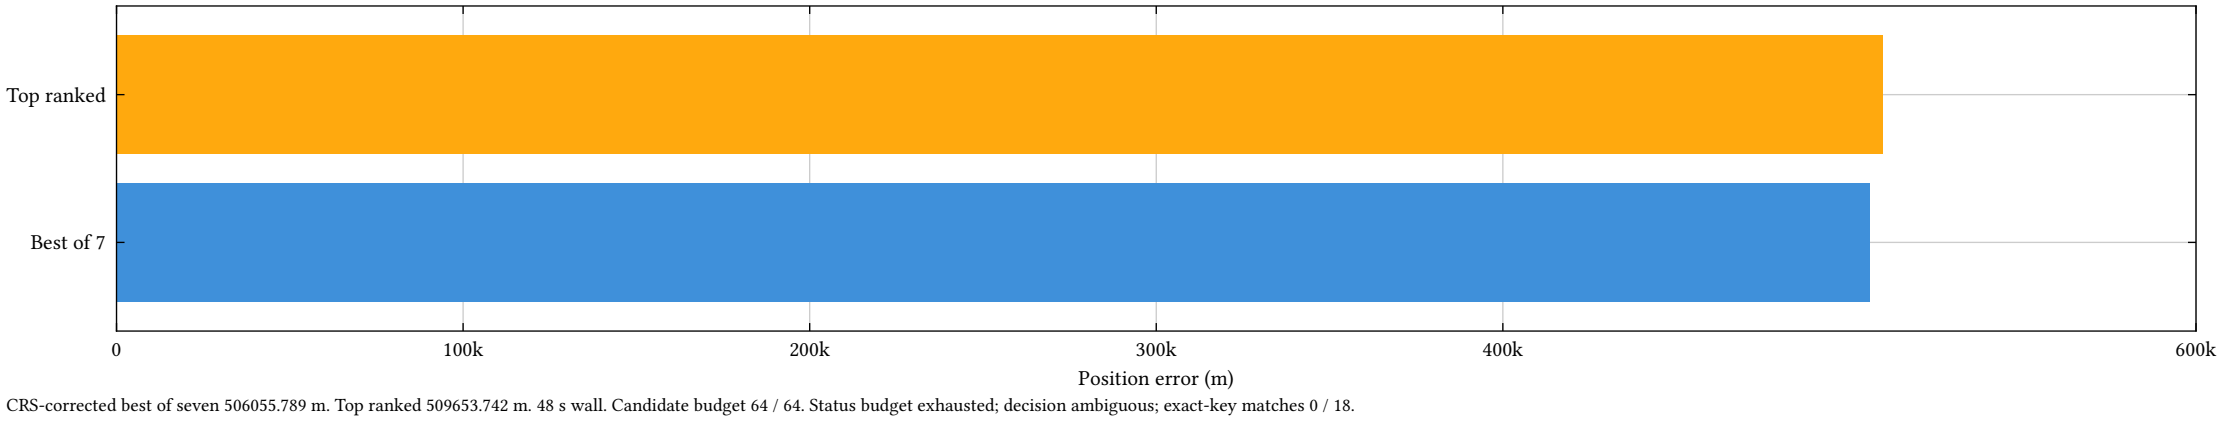
Processed source pairs out of 333340.



Legacy budget processed 87 pairs. Complete pass processed 333340 pairs into 3678 coarse 10 km cells. 7.452 s voting time only; excludes scoring and map evaluation.

Unresolved full-search case

Pairwise search attempt. Error to known position for top-ranked hypothesis and minimum among seven hypotheses.



CRS-corrected best of seven 506055.789 m. Top ranked 509653.742 m. 48 s wall. Candidate budget 64 / 64. Status budget exhausted; decision ambiguous; exact-key matches 0 / 18.

The previous A43 error values were superseded after correcting the truth-to-search CRS transformation. Corrected evidence: data/accuracy/diagnostics/2026-10-26/evaluator/a35-diagnostic.json, SHA-256 c8b2c35f1056e634d6f4e2ff675309e4a537b6aad481e1ae5bc892e150ccca37. Truth EPSG:32619 was transformed to search EPSG:32618. Source reports and input SHA-256 values are recorded in adjacent JSON. Baseline report 92ac3d08d13a0e159bf6bab7aa2b45ec702ad5899e4913962c5bcabd2d1cde57. LOS and search report a080de70d2d65e11e5fb355d8fae576572f7f8ae924f4017a92768b029617398. Wedge report e6302f639f1eaf7ea89082659ac1b24625bc77be91d052652b46cdac76ea7dcd.

These panels report separate measurements and workloads. The matched baseline compares identical inputs only. LOS timing is component-level, wedge timing covers voting only, and the full-search case remains unresolved. No held-out accuracy or end-to-end speed claim is made.
