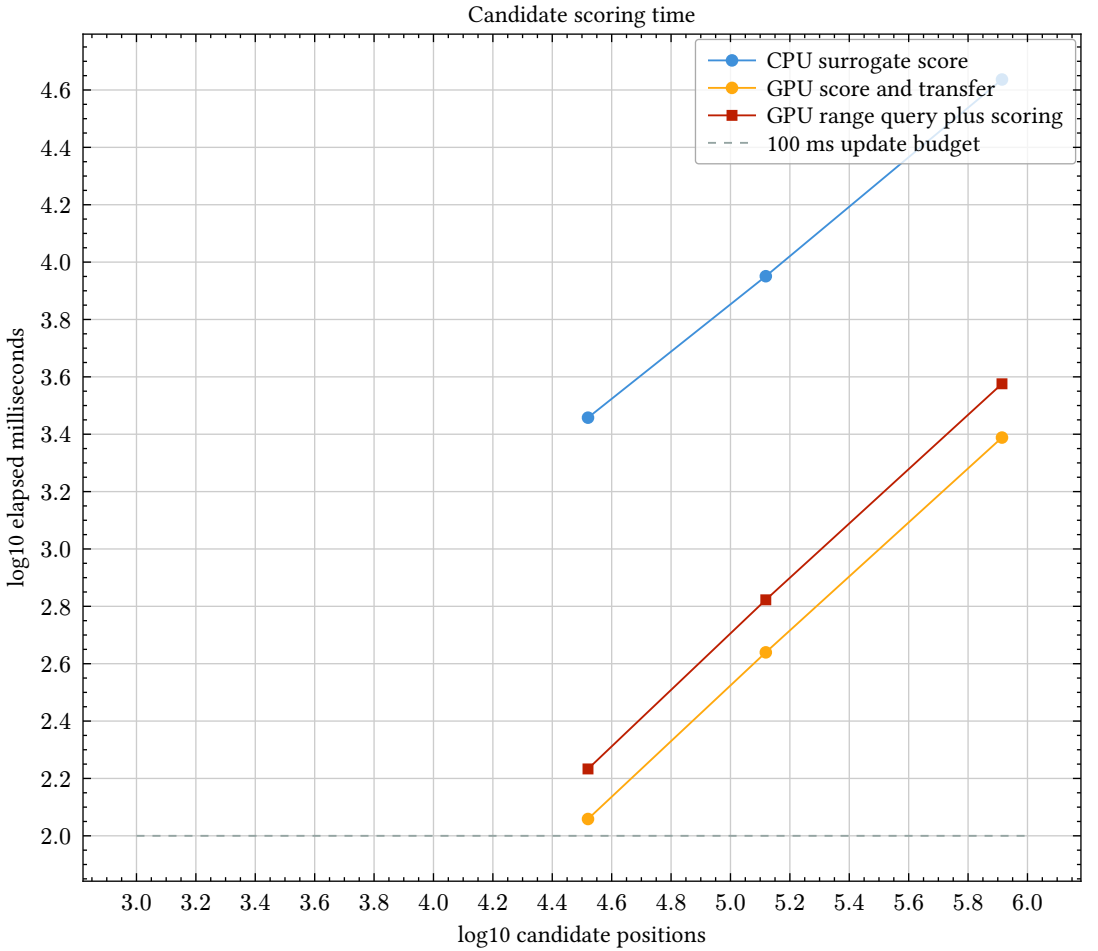
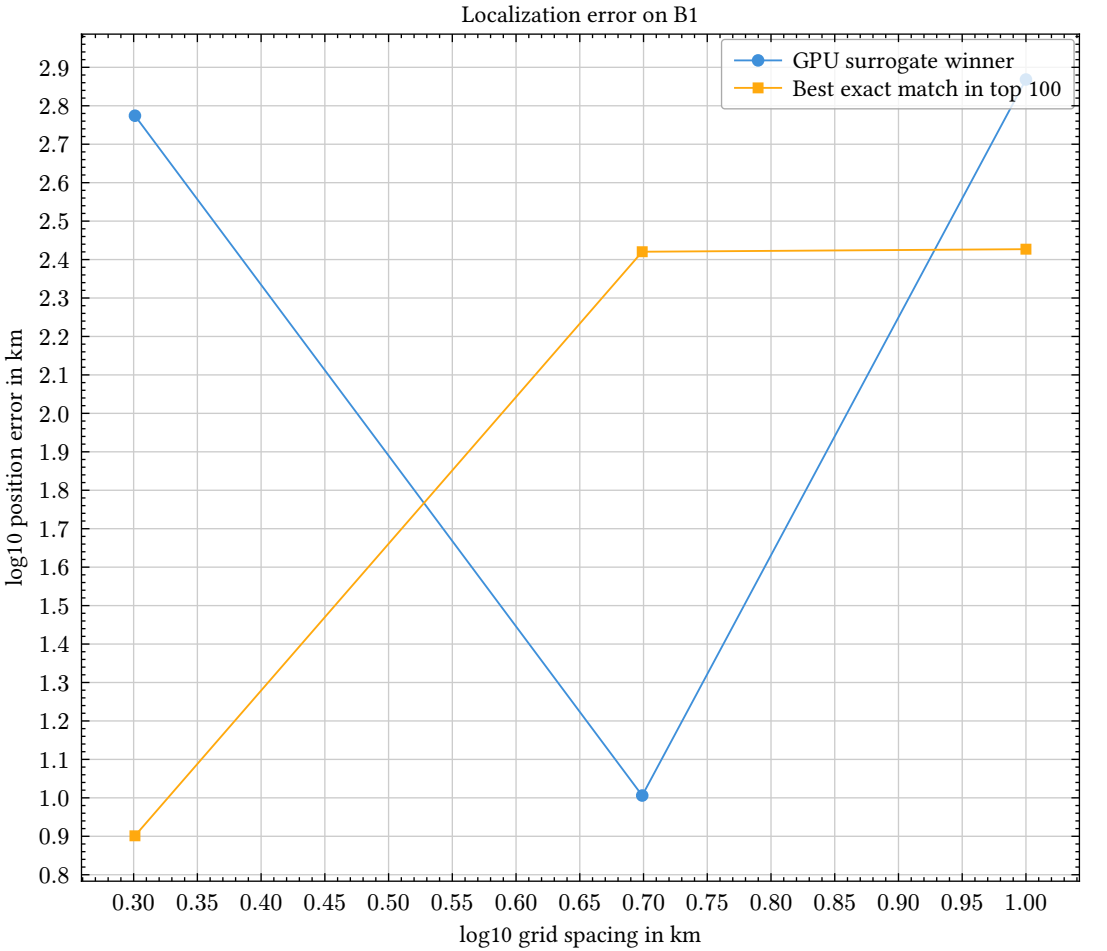
Full-coast GPU search benchmark





B1 reports scored against 53,684 East Coast AIS and chart-aid locations with a 10 km range gate. GPU scores independently select the nearest compatible object per report; the exact rerank applies one-to-one association to the top 100 candidates. Search bounds cover 24.5°–45.5° N and 82°–66° W. Land filtering and land-blocked visibility are not included. Timings exclude exact reranking and candidate-grid construction.
