Search time versus detected charting aids

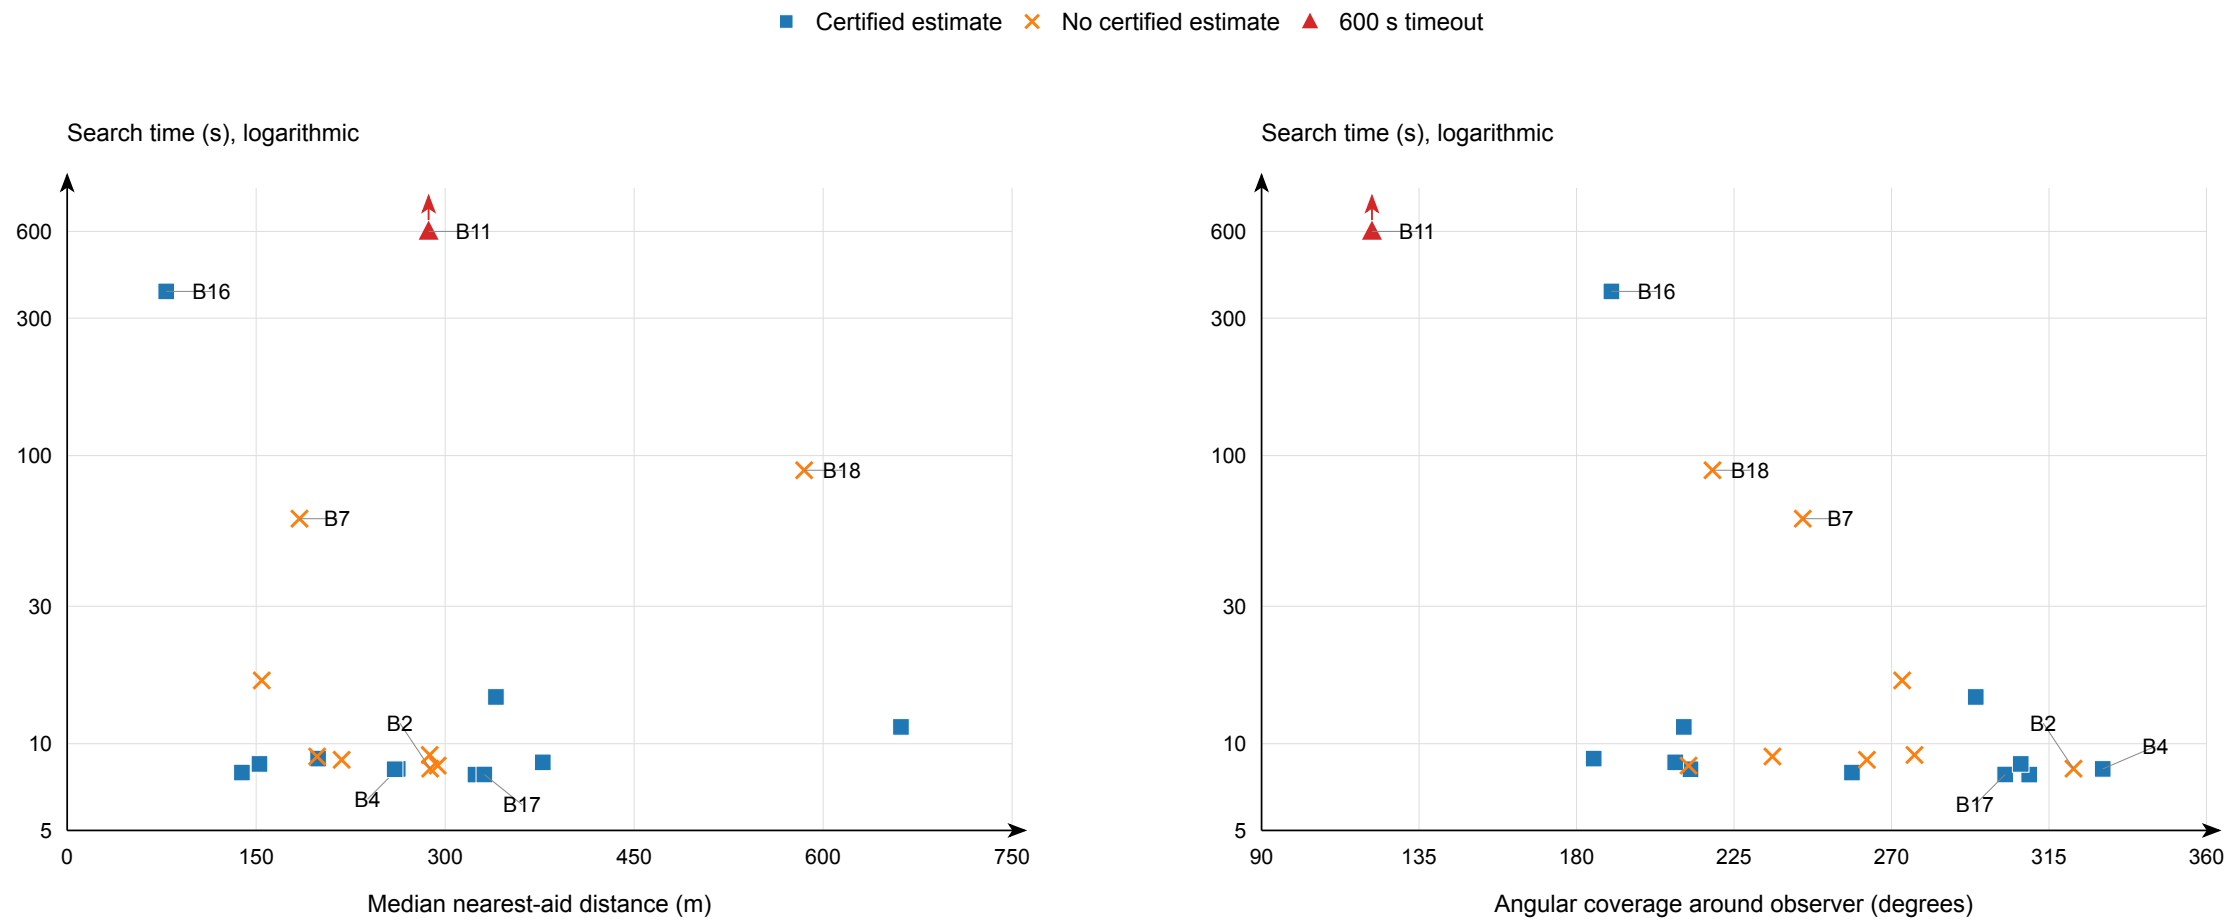

■ Certified estimate × No certified estimate ▲ 600 s timeout

20 eligible sites · GPUs 0–2 · Search only; preparation, simulation and selection excluded · B11 stopped at 600 s

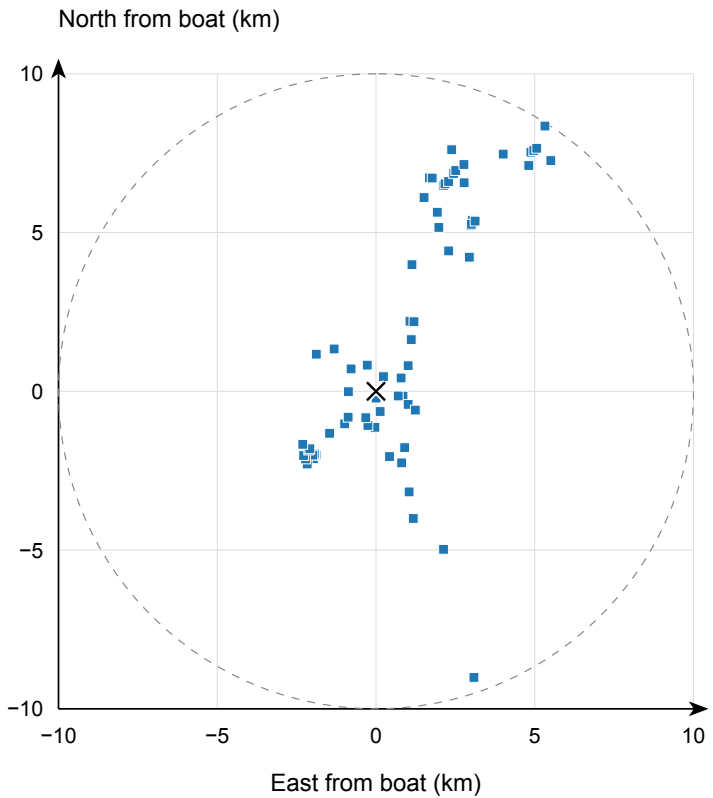

Aid congregation and search time

Each point is one eligible site · Spacing uses detected aid representatives · Angular coverage is 360° minus the largest noiseless bearing gap

Detected charting aid positions relative to the boat

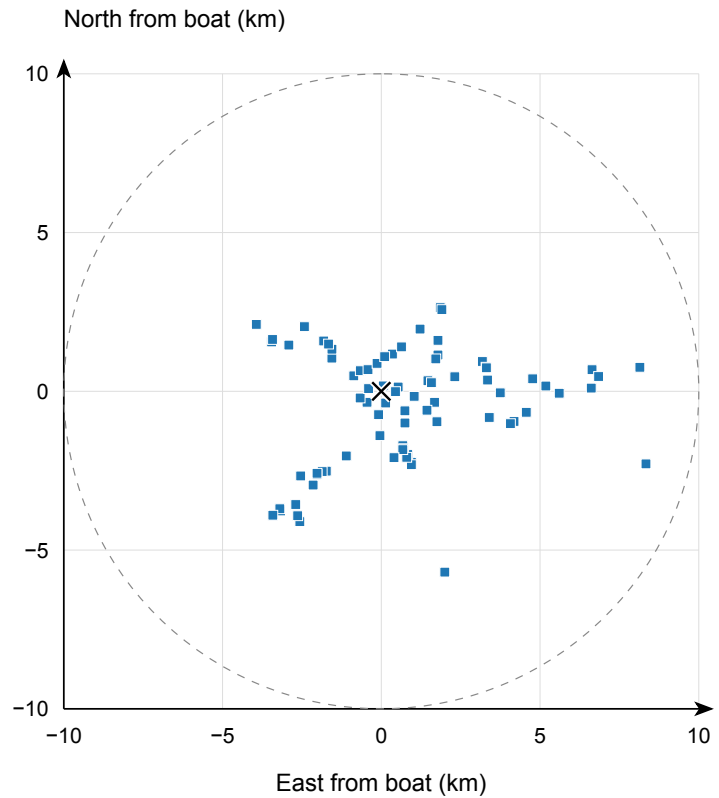

Blue squares mark detected aid representatives · Black × marks the simulated boat · Common scale in every panel

B2 · Portland ME

67 aids · median nearest neighbor 288 m

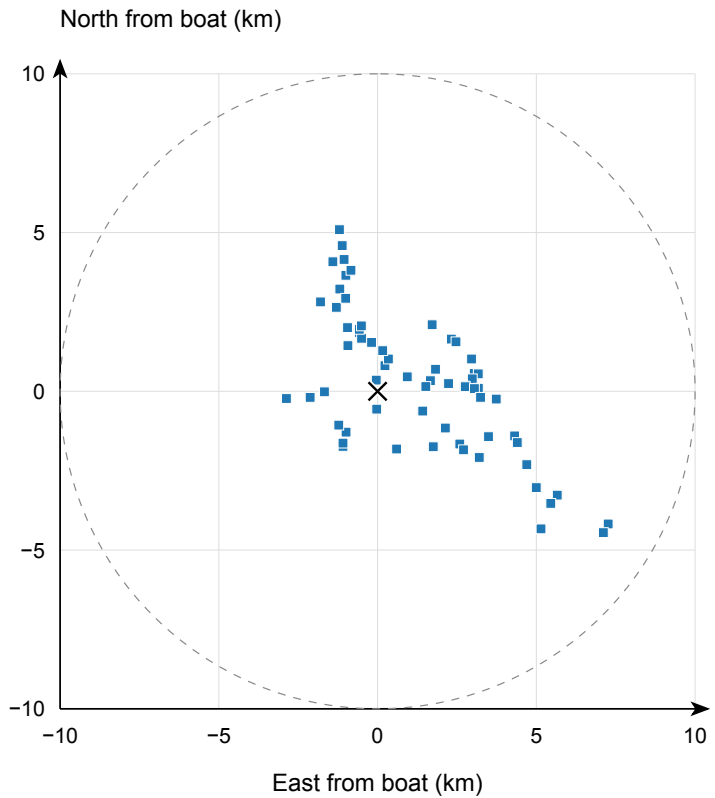

Angular coverage 322° · 4 near-coincident member pairs

B4 · Boston

79 aids · median nearest neighbor 262 m

Angular coverage 330° · 0 near-coincident member pairs

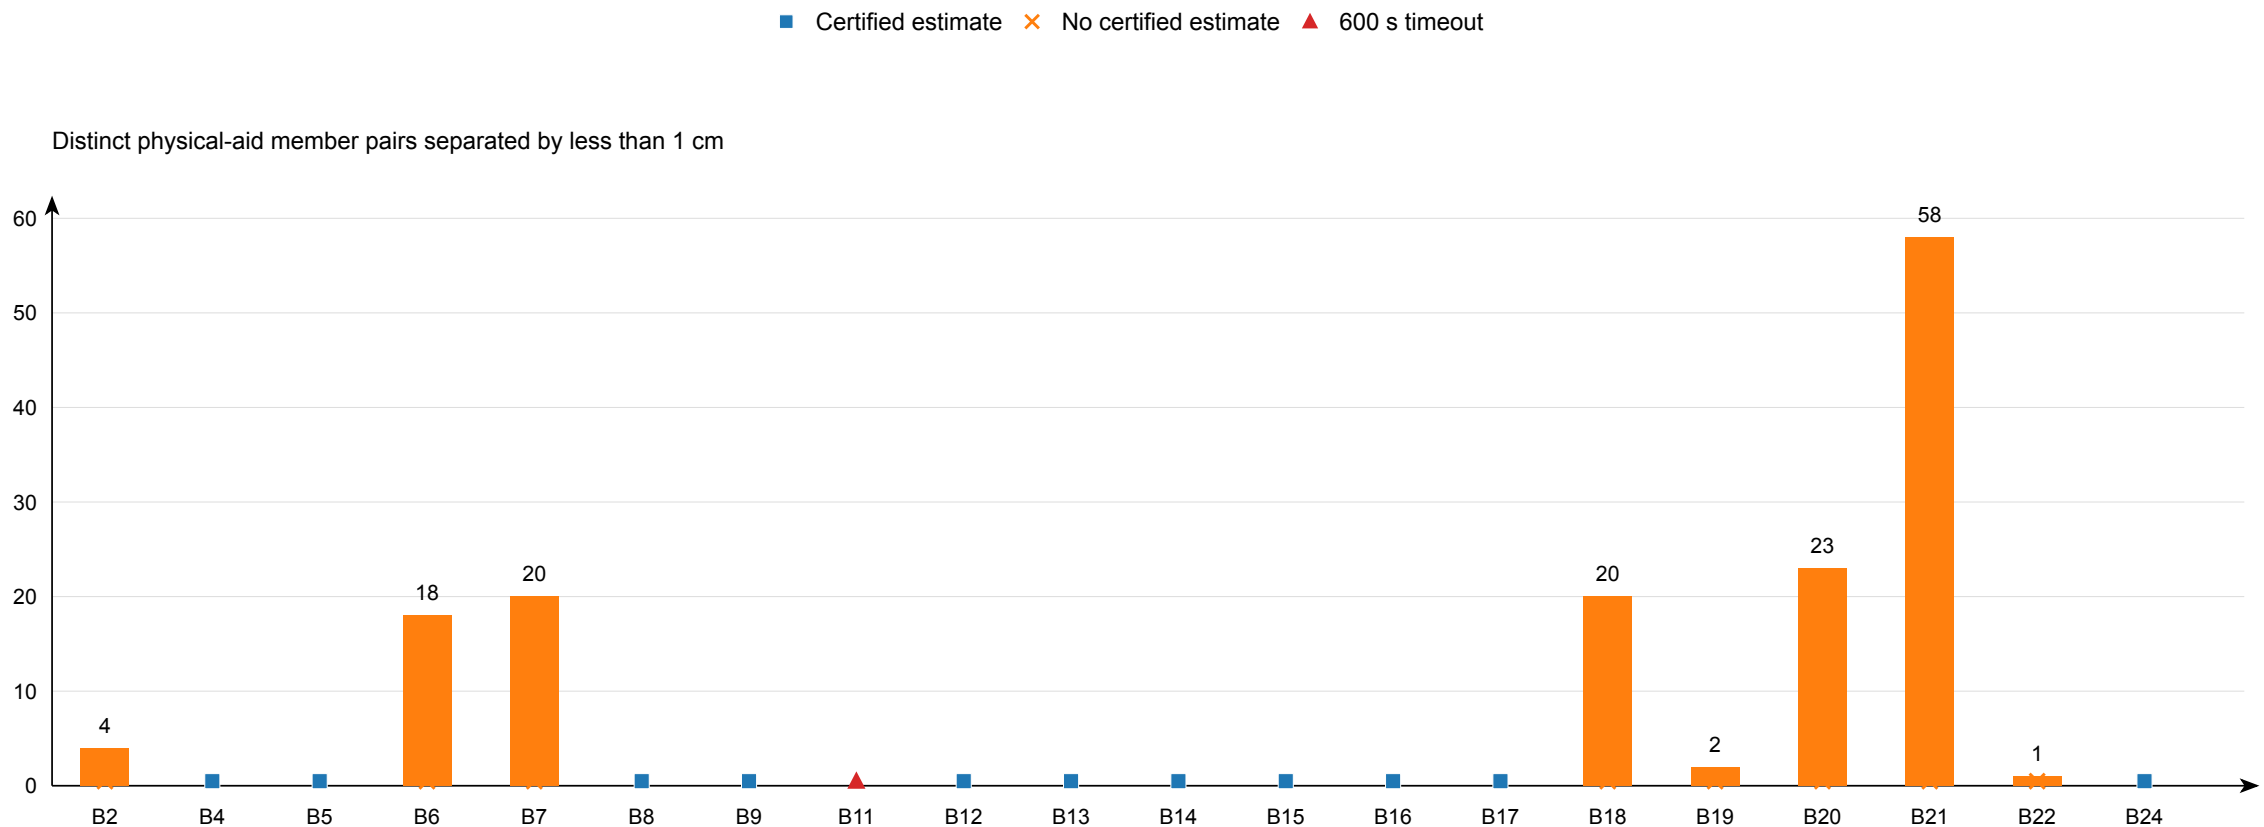

B17 · Charleston

64 aids · median nearest neighbor 331 m

Angular coverage 302° · 0 near-coincident member pairs

Near-coincident catalog members in detected aid groups

All eight no-estimate sites contain these near-coincident members; the eleven certified sites and the timeout contain none.

Members are retained catalog identities inside angular groups, not separate detected reports · This association does not identify the exact boundary-warning trigger
