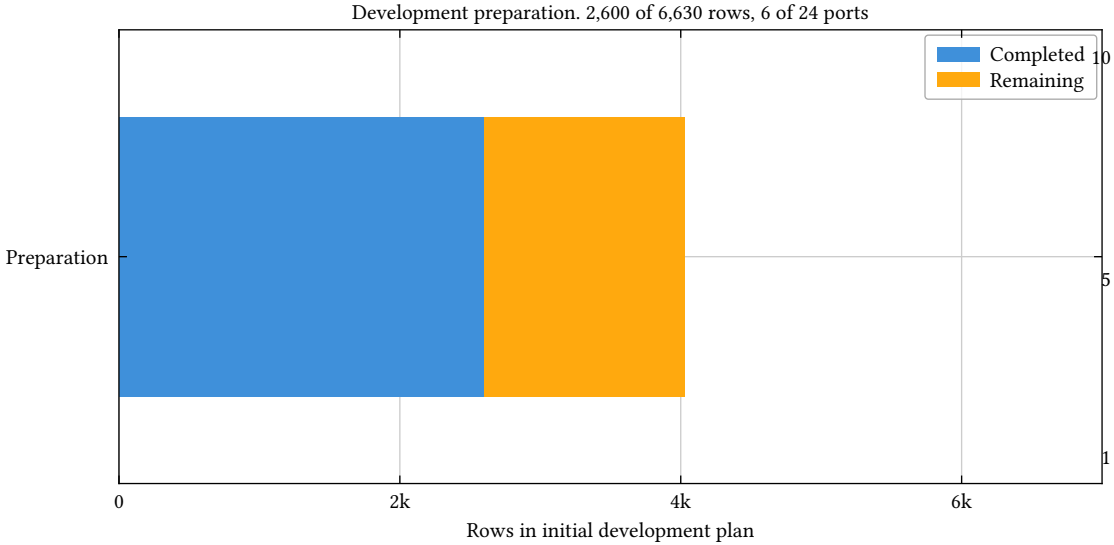
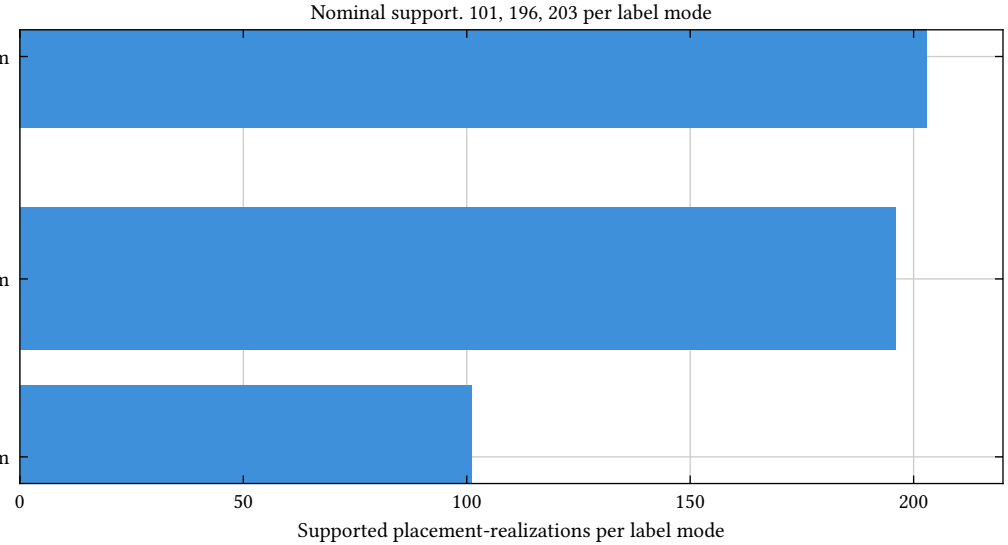
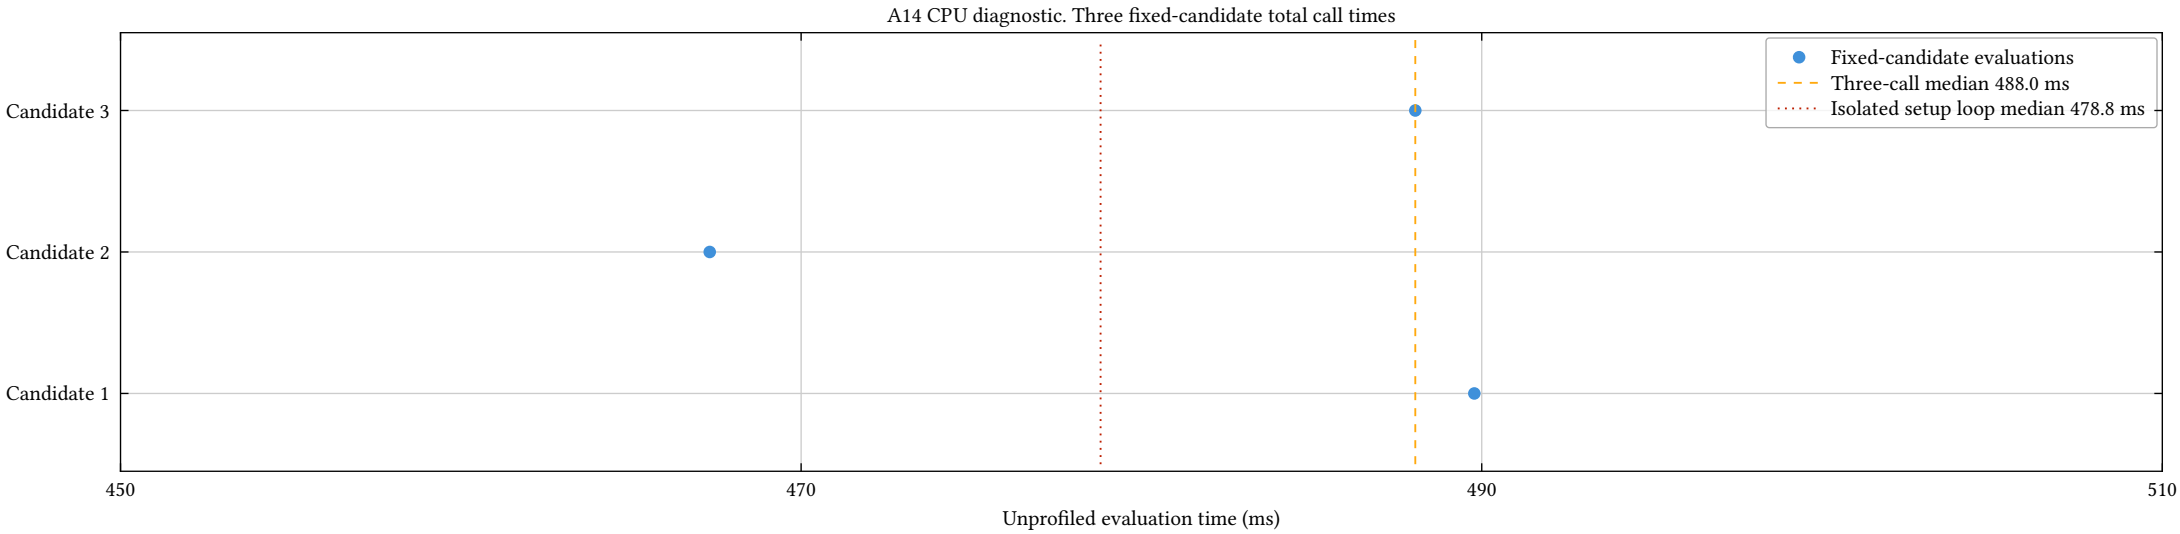
Accuracy pipeline progress

Interim snapshot dated 2026-10-25. Refresh time was not recorded; figure compiled 2026-10-25 23:50 EDT.







66,668 catalog records comprise 2,268 AIS rows and 64,400 chart rows. Of the chart rows, 19,820 are linkage-resolved and 44,580 are identity-limited with geometry retained. A14 profiled three fixed candidates against a four-report development measurement set and a known-coverage map. The 478.8 ms setup figure is an isolated-loop median, about 98% of the 488.0 ms candidate-call median; this directional comparison is not a precise stage timing.

Preparation and support counts are not estimator outcomes. Accuracy, held-out performance, and current GPU speedup are not measured here; field validation with measured bearings and independent truth remains pending.
