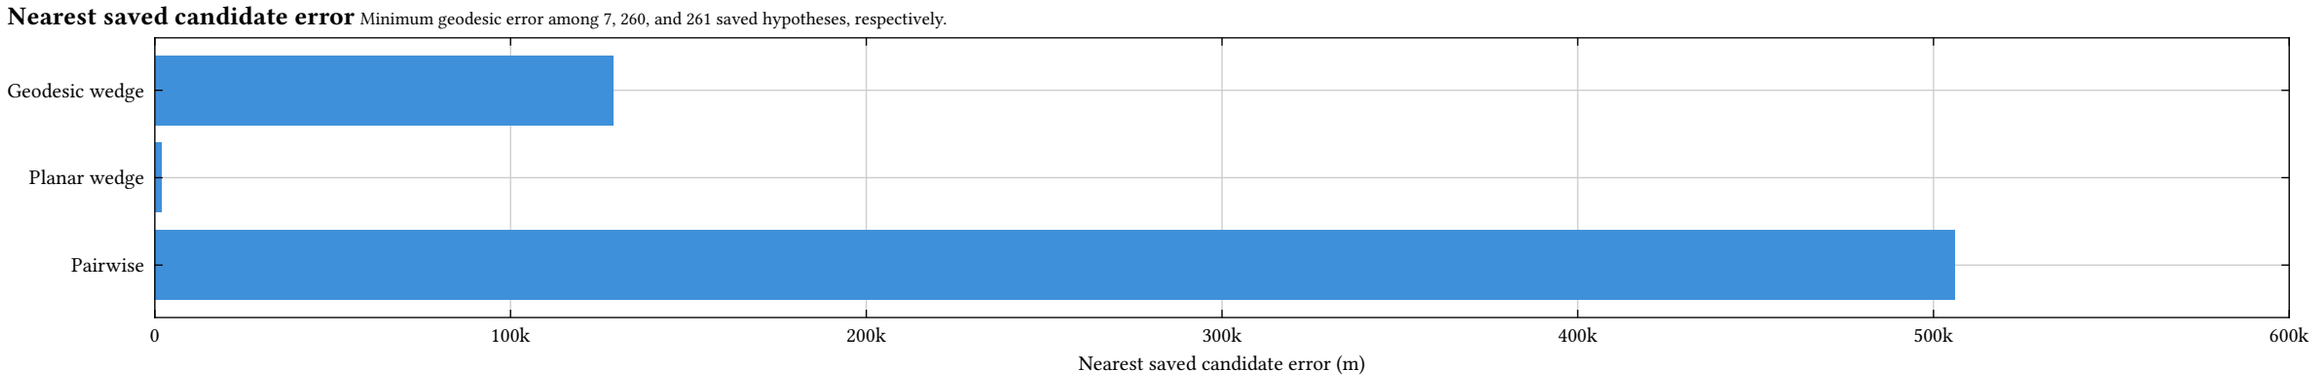
Full-coast search diagnostics

Three failed searches on one frozen five-report development case. Snapshot 2026-10-26.

Top-ranked estimate error CRS-correct WGS84 geodesic distance to evaluator truth. Lower is closer; none was accepted.

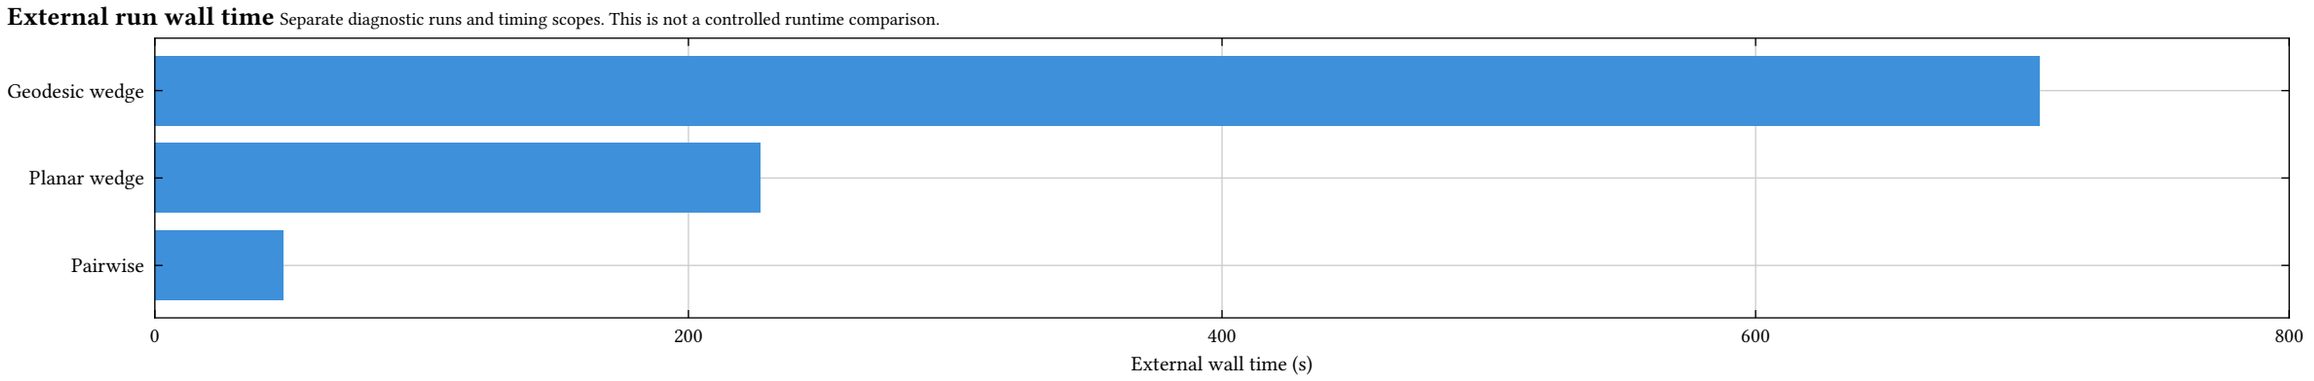
Pairwise 509,653.742 m. Planar wedge 1,898,447.237 m. Geodesic wedge 548,327.465 m.

Nearest saved candidate error Minimum geodesic error among 7, 260, and 261 saved hypotheses, respectively.



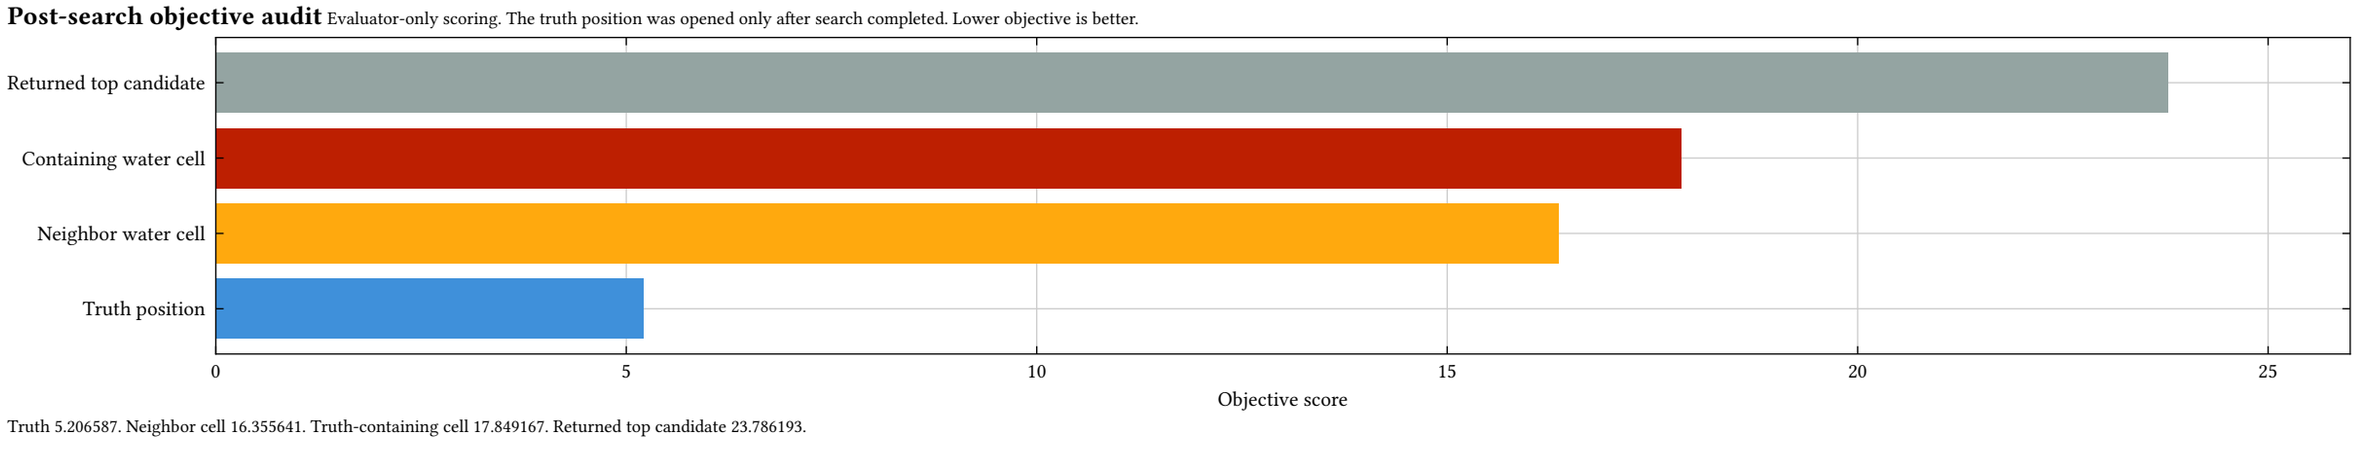
Pairwise 506,055.789 m, minimum of 7. Planar wedge 1,897.057 m, minimum of 260. Geodesic wedge 128,757.746 m, minimum of 261.

External run wall time Separate diagnostic runs and timing scopes. This is not a controlled runtime comparison.



Pairwise 48 s. Planar wedge 227.053 s external one-shot. Geodesic wedge 706.479 s external cold one-shot.

Post-search objective audit Evaluator-only scoring. The truth position was opened only after search completed. Lower objective is better.



Truth 5.206587. Neighbor cell 16.355641. Truth-containing cell 17.849167. Returned top candidate 23.786193.

Run	Source pairs	Generated cells	Candidate cap	Saved	Accepted
Pairwise	not reported	not reported	64	7	No
Planar wedge	333,340 / 333,340	1,530,303	256	260	No
Geodesic wedge	333,340 / 333,340	1,457,546	256	261	No

The frozen geodesic run recorded 209 failed solver samples among 83,001,660. A separate later solver audit converged all 209 after tightening the internal iteration target; it did not alter the frozen run. Although all source pairs were visited, generation completeness was false and the frozen search status was failed. Both wedge runs exhausted the exact-scoring budget and remained ambiguous. **The truth-containing 250 m cell was generated and classified as water. Its mean normalized residual was 0.23667468, while the last selected proposal had 0.02674343, leaving the cell outside the top-256 exact-scoring set. The neighboring water cell scored 16.355641148, the containing cell 17.849166741, and the returned top candidate 23.786192787. This shows why an angle-window-only explanation is insufficient: the known cell existed but residual-based ordering omitted it under the candidate cap. Truth was used only after search.**

Provenance and input hashes are stored in adjacent JSON. The frozen geodesic run is commit e940dad. A35 evaluator diagnostic SHA-256 c8b2c35f1056e634d6f4e2ff675309e4a537b6aad481e1ae5bc892e150ccca37. The geodesic-run evaluator diagnostic SHA-256 e5faca63b9d1a8fbf2cab693548b1807e34605c9a45ffac190adf450ad768a13.
