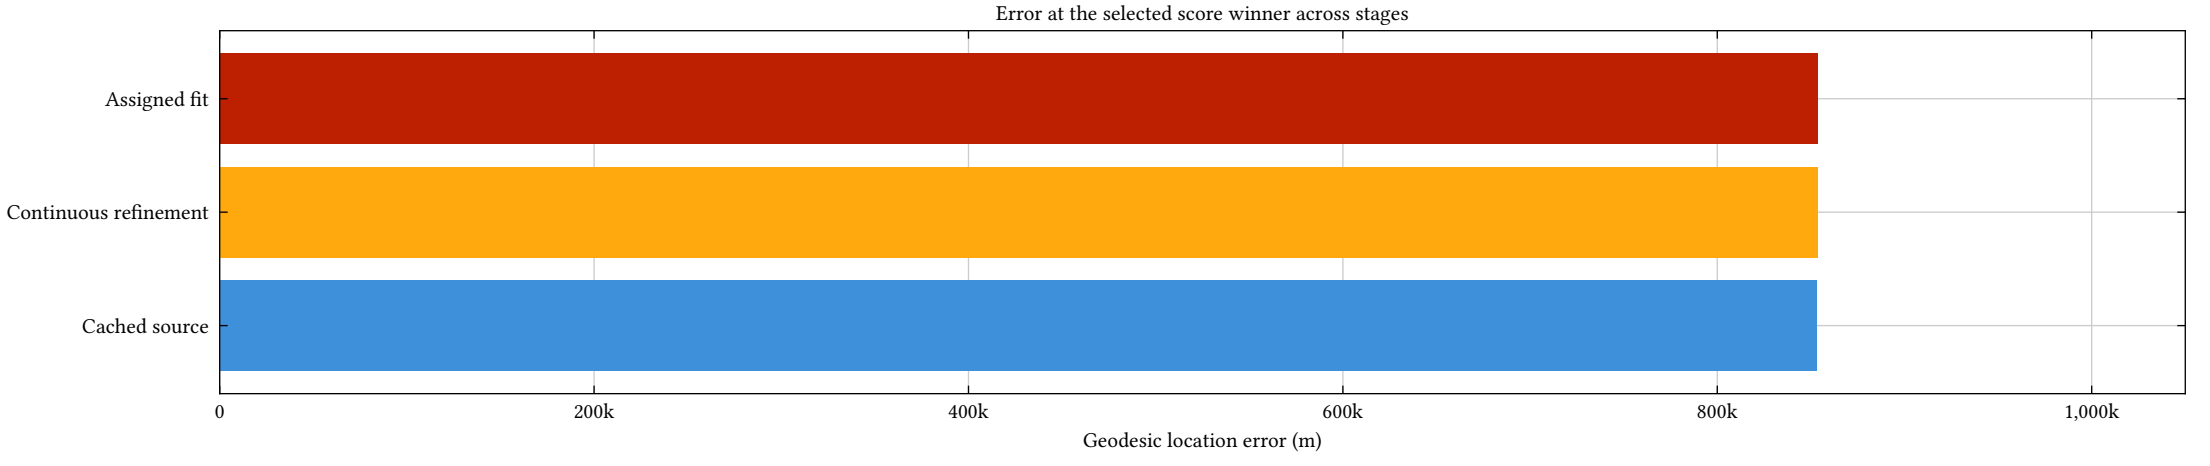
Cached-candidate refinement and assigned-fit diagnostic

64 score-selected modes from an incomplete, partial-cache source run. Snapshot dated 2026-10-26.

Assigned fitting improved one nearby alternative, while the selected score winner remained wrong by 853.440 km. This is not a localization fix or release-gate result.

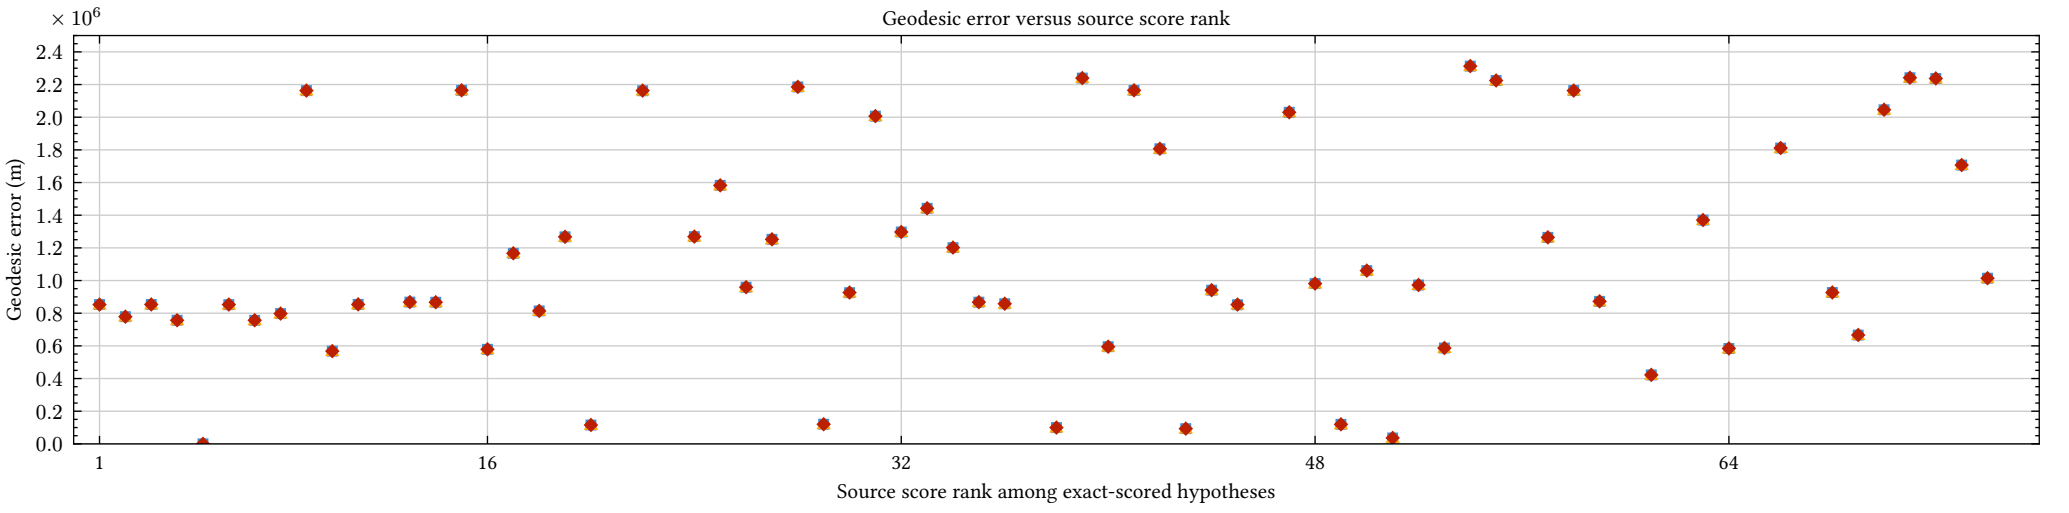
Selected score winner The source-score-rank-3 seed became the continuous-refinement score winner. Assigned fitting retained that same score winner and its wrong four-object association.



Lowest-error selected alternative. Not the estimate. This separate mode improved from 296.286 m to 266.378 m, then to 181.279 m after assigned fitting. Its assigned objective rank is 16 of 64.

Mode	Source rank	Errors source ⟶ continuous ⟶ assigned (m)	Scores source ⟶ continuous ⟶ assigned	True-key assignments source ⟶ continuous ⟶ assigned	Assigned score rank	Assigned error rank
Selected score winner	3	853406.1 ⟶ 853439.8 ⟶ 853439.8	15.238 ⟶ 10.324 ⟶ 10.324	0 / 4 ⟶ 0 / 4 ⟶ 0 / 4	1 / 64	23 / 64
Lowest-error alternative. Not estimate.	5	296.3 ⟶ 266.4 ⟶ 181.3	16.356 ⟶ 14.86 ⟶ 14.777	4 / 4 ⟶ 4 / 4 ⟶ 4 / 4	16 / 64	1 / 64

Errors across the selected subset Each marker is one of 64 score-selected modes. The horizontal axis shows the original score rank among 47,182 exact-scored hypotheses. These ranks come from an incomplete source search and are not a complete-domain ranking.



Series order. Square is cached source, triangle is continuous refinement, diamond is assigned fit. No legend box is used.

Assigned fitting completed 64 modes from 128 starts in 57.6525 s, accepting 106 of 232 exact steps. This is a selected-mode diagnostic, not full-frame or coast-wide timing. Across the 64 rows, objective score improved in 64 modes; final error improved in 31 and worsened in 33. Median error was 950060.5 m at source, 950085.8 m after continuous refinement, and 950085.8 m after assigned fitting. The source run left 47182 hypotheses exact-scored, 82 unresolved, and 1410282 in an unknown state at interruption.
